

Do you hear buzzing, humming, or ringing in the ears?
You're not alone.

Nearly 50 million Americans have tinnitus—the name for this frustrating, yet common hearing sensation.

Tinnitus is not a condition itself—usually, it's a symptom of another health condition, such as hearing loss.

Hearing loss changes how the brain processes sound.

Tinnitus may be how the brain fills in the gaps to the missing sound frequencies.

While there's no cure for tinnitus, Miracle-Ear hearing aids are equipped to give you lasting treatment and relief.
